# biCanvas

biCanvas | GPS Integration

OVERVIEW

GPS Integration in biCanvas Enterprise Application helps to connect the GSP Devices in your vehicles and Machineries with the Operations in the Enterprise Application. This helps in better monitoring and automation of workflow.

The integration will connect the GPS Data with various modules like CMS, RMS, PMM and OMS for operations like Dispatch Monitoring, Client Information System, Vehicle Information System, Diesel Tracking, Maintenance Scheduling, etc.

FEATURES & BENEFITS

Client Information System

- Customers can track the dispatch details using a link sent via SMS. The details include the Vehicle, Material, Weight among others.

- Status can be tracked in terms of the stages like Production, Dispatched, Arrived and Delivered.

- The vehicle can be tacked on a map which enables the customer to know to estimated time of arrival.

Vehicle Information System (Only with PMM and OMS)

- Automated vehicle odometer reading via GPS helps in having the Vehicle Average estimated when integrated with the OMS Module (Fuel Issue)

- Fuel Tracker (if installed) helps in getting the fuel reading integrated to the OMS module for accurate tracking of consumptions and to avoid theft.

- Vehicle and Machinery maintenance can be automatically scheduled and reminded by integrating the Running hours and/or distance with the PMM module.
